PhpStorm配合Xdebug进行Web Application进行断点调试

- 1. 首先需要安装php-xdebug扩展
 - o mac环境下建议使用brew命令进行便捷安装

```
brew install phpXX-xdebug
```

注: 'XX' 为当前php运行环境版本 如 brew install php70-xdebug

o windows环境下须下载运行环境版本对应的扩展dll文件进行加载

下载地址 http://pecl.php.net/package/xdebug

○ Linux环境下需要进行编译安装

下载地址 http://pecl.php.net/package/xdebug

在编译过程中可能需要其他依赖,须先安装依赖再进行编译

2. 扩展安装完成后,需要在 php.ini 添加以下内容

```
[xdebug]
xdebug.profiler append = 0
xdebug.profiler_enable = 1
xdebug.profiler enable trigger = 0
xdebug.profiler_output_dir ="/var/tmp/php/xdebug"
xdebug.trace_output_dir ="/var/tmp/php/xdebug"
xdebug.profiler output name = "cache.out.%t-%s"
xdebug.remote_enable = 1
xdebug.remote mode = "req"
xdebug.remote handler = "dbgp"
xdebug.remote_host = "127.0.0.1"
xdebug.remote port = 9001
xdebug.idekey="PHPSTORM"
xdebug.remote autostart = no
#zend extension="/{extension dir}/xdebug.so"
#zend extension="/{extension dir}/xdebug.dll"
```

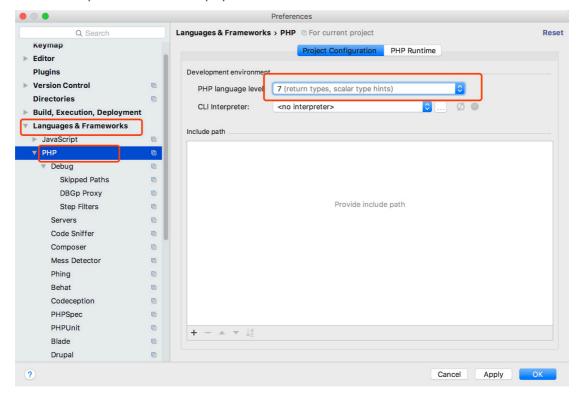

添加完成后重启服务,打印 phpinfo() ,确认xdebug模块已加载。结果如下图:

xdebug

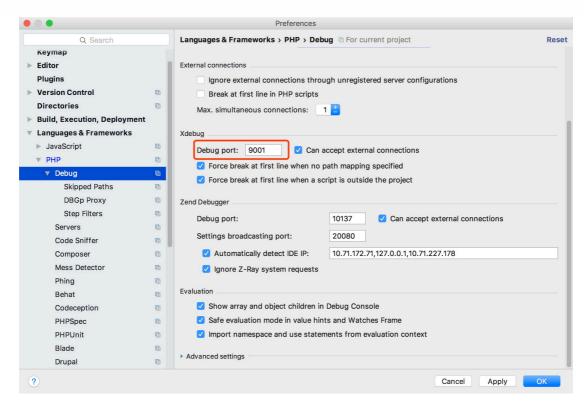

3. 配置phpStorm

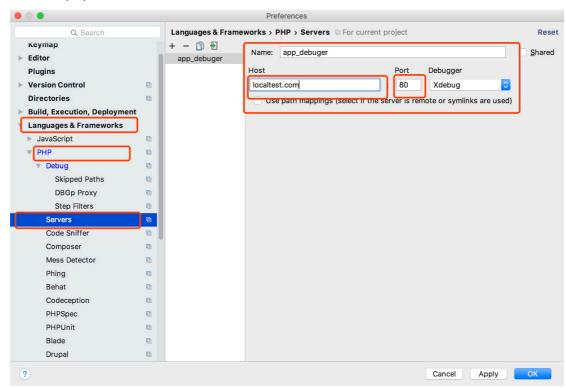

○ 首先打开PhpStorm设置,配置php版本

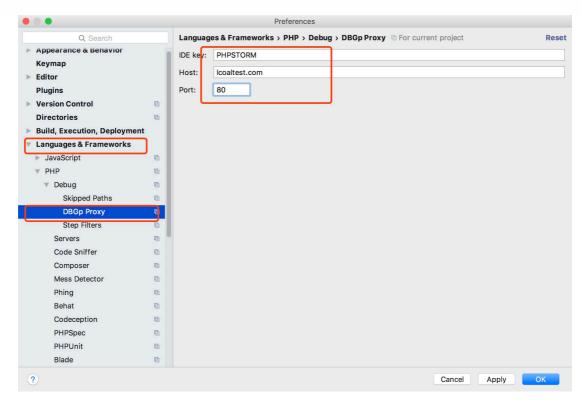

。 然后,配置debug监听端口为9001(与配置中的xdebug.remote_port相同)

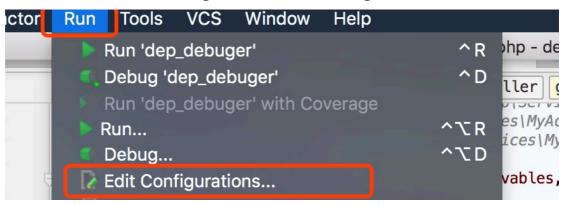

。 增加一个phpServer, 配置server的名称, 本地测试域名以及端口

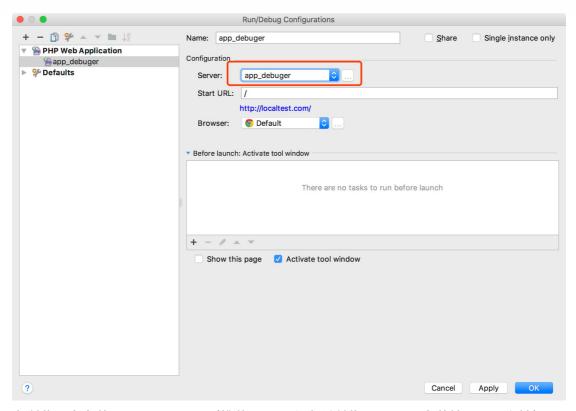

o 配置debug代理

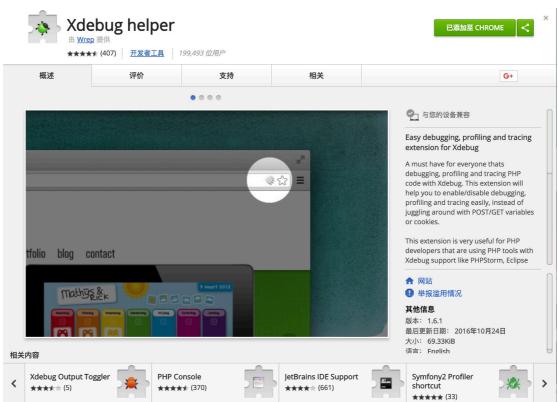

。 在菜单栏中点击Run->Edit Configurations...增加一个debug配置 如下图

点击'+'号 并选择添加一个PHP Web Application ,配置名称及所使用的server(即我们刚才添加的server)

。 在浏览器中安装Xdebug-Helper(推荐google和火狐浏览器 google安装扩展需要翻墙)

o 右键点击扩展图标,打开选项配置,配置ide选项

Xdebug helper

Easy debugging, profiling and tracing

Introduction

First install and configure Xdebug, then set your IDE key below. Now tell Xdebug to debug, profile or trace by clicking the little bug in the addressbar:

- Debugging, profiling & tracing disabled
- **5** Debugging enabled
- () Profiling enabled
- Tracing enabled

Use Ctrl+Shift+X (Cmd+Shift+X on Mac) to open the popup or Alt+Shift+X to toggle the debugging state.

IDE key

Select your IDE to use the default sessionkey or choose other to use a custom key.

Trace Trigger Value

If your xdebug is configured with a unique trace trigger key, set that value here. This value is blank by default.

Profile Trigger Value

If your xdebug is configured with a unique profile trigger key, set that value here. This value is blank by default.

Feel free to submit ideas, bugs and pull request to our Github project

o 在phpStorm中开启debug listening监听

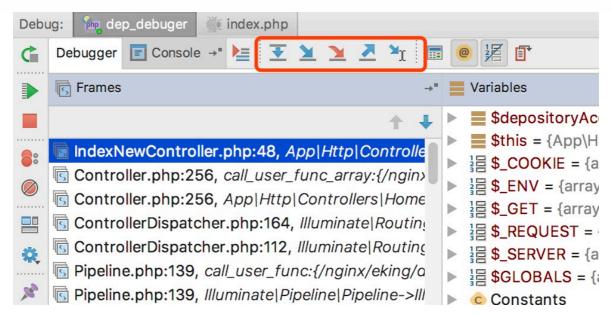

或点击Run->Start Listening for PHP Debug Connections

同时在浏览器中激活扩展

4. 在php项目中增加断点,并通过浏览器访问打点路由,然后返回phpStorm界面即可进行断点调试

注:在phpStorm中开启Debug也可进行断点调试,
